

AegisCheck

Unified AI-Powered Device Security Advisor

The Problem

Fragmentation

Too many separate tools.

Blind Spots

Passwords, settings, and permissions not checked together.

No Prediction

Tools can't properly forecast future risks.

The Solution

- All-in-one security analysis, no juggling multiple tools
- Integrated AI risk analyzer (onboard neural network + Grok API)
- Predictive insights for future vulnerabilities
- Simple, clean interface

How it Works

- OS Security Scan – checks updates, security settings, and system integrity
- Password Audit – scans saved passwords for breaches, Wi-Fi profiles, and risky reuse
- Permissions & Autostart Audit – reviews app permissions and startup programs
- Predictive AI – onboard neural network + Grok API anticipate future vulnerabilities
- Unified Dashboard – simple interface; platform-specific details hidden unless expanded

AI Integration

- Onboard Neural Network + Grok API integration
- Predicts potential future vulnerabilities
- Generates actionable insights for OS, passwords, and permissions
- Summarizes risk in a simple score & grade

DEMO

Conclusion & Future

- Unified device security, predictive AI, actionable insights
- Continuously learns from your device history
- Future expandability: new checks, integrations, multi-device support
- Scalable framework for evolving security challenges

Mentorship Takeaways

- Gained hands-on experience integrating AI with system security checks
- Learned to design a project with real-world impact and measurable outcomes
- Understood the importance of structuring code for scalability and maintainability
- Improved problem-solving and debugging skills through mentor guidance

THANK YOU
